Overhead line - Wikipedia

Railway electrification in Great Britain began in the late 19th century. A range of voltages has been used, employing both overhead lines and conductor rails. The two most common systems are 25 kV AC using overhead lines, and the 750 V DC third rail system used in southeast England and on Merseyrail. As at April 2019, 3,736 miles (6,013 km) (38%) of the British rail network was electrified.
