This article provides information for Extension professionals on the correct analysis of Likert data. The analyses of Likert-type and Likert scale data require unique data analysis procedures, and as a result, misuses and/or mistakes often occur. This article discusses the differences between Likert-type and Likert scale data and provides recommendations for descriptive statistics to be used during the analysis.

Analyzing Likert Data The Journal

Means for paired Likert-type items were compared using parametric statistical procedures (e.g. t-tests or analysis of variance F-tests) in 32 (34%) of the articles. These data are introduced to illustrate that a variety of statistical methods are being used to analyze data from individual Likert-type items in the Journal of Agricultural Education.

The worksheet to the right shows what five-point Likert data look like when you have two groups. Because Likert item data are discrete, ordinal, and have a limited range, there's been a longstanding dispute about the most valid way to analyze Likert data. The basic choice is between a parametric test and a nonparametric test.

Start analyzing data from the Likert scale with descriptive statistics. Although it may be tempting, resist the urge to take numerical answers and calculate an average. Add an answer "strongly agree" (5) to two "disagree" (2) answers, which would give an average of 4 but, what does this number mean?

Another appropriate tool for the analysis of Likert item data are tests for ordinal data arranged in contingency table form. These include the linear-by-linear test, which is a test of association between two ordinal variables, and the Cochran-Armitage test, which is a test of association between an ordinal variable and a nominal variable.

How to Analyze Likert Scale Data - Statistics By Jim

How do you analyze Likert scale data? Likert scales are the most broadly used method for scaling responses in survey studies. Survey questions that ask you to indicate your level of agreement, from strongly agree to strongly disagree, use the Likert scale. The data in the worksheet are five-point Likert scale data for two groups.
