Construction vibrations are a known nuisance and can damage existing structures
if they are not properly monitored and accounted for. As a proactive means to
mitigate vibration damage claims, nearby buildings should be inspected prior to
and after construction and monitored during construction.

About us - Seismic Surveys, Inc - Ground Vibration & Sound ...

Drilling and blasting is the controlled use of explosives and other methods such as gas pressure blasting pyrotechnics, to break rock for excavation. It is practiced most often in mining, quarrying and civil engineering such as dam, tunnel or road construction. The result of rock blasting is often known as a rock cut.. Drilling and blasting currently utilizes many different varieties of ...

vibration source is blasting, either in mining or, with less assurance, in construction. Construction heavy equipment-caused vibration should be governed by the one of the FTA limits in the U.S., of which the Class III limit for timber-framed homes (most homes in the U.S.) is shown in the diagrams in this chapter. The related Swiss
