A probability of one represents certainty: if you flip a coin, the probability you'll get heads or tails is one (assuming it can't land on the rim, fall into a black hole, or some such). The probability of getting a given number of heads from four flips is, then, simply the number of ways that number of heads can occur,

### **Introduction to Probability and Statistics**

In probability theory and statistics, a probability distribution is the mathematical function that gives the probabilities of occurrence of different possible outcomes for an experiment. It is a mathematical description of a random phenomenon in terms of its sample space and the probabilities of events (subsets of the sample space).. For instance, if  $X$  is used to denote the outcome of a coin ...
