Name: ___ PhET 2D Motion and Vectors Simulations Lab Introduction: A vector quantity is one that has both a magnitude and a direction . For instance, your car's velocity vector will have a magnitude (24 m/s) and a direction (northeast or 45 degrees). These simulations will illustrate how vectors are made of X and Y components, how two vectors can be added to produce a resulting vector, and how the acceleration vector affects the velocity vector in two-dimensional motion.
