R Markdown Cheatsheet. R Markdown is an authoring format that makes it easy to write reusable reports with R. You combine your R code with narration written in markdown (an easy-to-write plain text format) and then export the results as an html, pdf, or Word file. You can even use R Markdown to build interactive documents and slideshows.

Introduction to Statistics with R - GitHub Pages

Part of Biostatistics For Dummies Cheat Sheet. For a correlation test in biostatistics (such as the Pearson or Spearman test), pick the scatter chart that looks like an important amount of correlation. Each chart shows the value of r (the correlation coefficient) and the required number of analyzable subjects (each providing an x and a y value). For example, if the scatter chart in the lower left corner (corresponding to $r = 0.6$) appears to show an important amount of correlation, you'll ...

Statistics Using R with Biological Examples

Biostatistics Terms and Concepts. There's no easy way to segue into this, so let's just dive right in. Descriptive vs Inferential Statistics. There are two main branches of statistics used in clinical literature evaluation; descriptive and inferential. They're both

Biostatistics Cluster Quickstart Guide

If r is 0, then there is no correlation between the two variables (the picture on the right above). If r is positive, then the two variables will increase or decrease together (you would call them "positively correlated"). And if r is negative, the two variables are inversely related (when one increased, the other decreases). You'd call these ...

Estimating Sample Size for Correlation Tests in Biostatistics

The Basics of R (Ch 2 - 5) This section presents an orientation to using R. Chapter 2 introduces the R system and provides guidelines for downloading R and obtaining and installing packages. Chapter 3 introduces how to work with data in R, including how to manipulate data, how to save and import/export datasets, and how to get help.

An alternative would be to generate an object that contains each of the model fits. In R, the easiest way to do this would be to generate a list, where each component of the list would be one of the fitted models --- that is, we would have a list of lists (the result of the `lrm` function is a list).
