Sliceform modelling is a technique which lies happily on the borders between art and mathematics. The models are made from intersecting sets of parallel planes which slot together in a clever way to generate interesting three-dimensional surfaces. In the fully open position the planes are at right angles and the surfaces are correctly defined, but all the models fold flat.

It is a paper model made from two sets of slices of the torus. It folds flat because the intersection of each set of slices acts as a hinge. The slices are cut so that one set includes the Villarceau circles. For more on Sliceforms do a web search with Google.
