1 - Commercial therapeutic protein drug products. Commercially available therapeutic proteins are formulated as both liquid and lyophilized products. The most common buffer utilized is phosphate, followed by histidine, citrate, acetate, tris, and others. Excipients that are most frequently utilized are sodium chloride, sucrose, and the non-ionic detergents polysorbate 20 and 80.

## **Therapeutic Protein Drug Products - 1st Edition**

Properties of therapeutic protein formulations are described and include opalescence, phase separation, color, and subvisible particles. An emphasis is placed on material and process testing to ensure success during manufacturing. The drug product manufacturing process, which includes the process of compounding to filling, is also covered.

### **Therapeutic Protein Drug Products: Practical Approaches to ...**

Provides a list and description of commercially available therapeutic drug products and their formulations; A comprehensive and practical overview of protein formulation in the laboratory, manufacturing, and the clinic; Discusses recent topics including high protein concentration, phase separation, opalescence, and subvisible particles
